

Town of Kernersville Engineering Department

Stormwater Management

Public Education & Outreach

The Town of Kernersville implements a stormwater public education and outreach program. Stormwater staff distributes educational materials and conduct outreach activities for private and corporate residents. The public education and outreach program addresses impacts related to stormwater discharges into our streams and also informs residents about actions they can take to reduce or eliminate these impacts.

The target audiences for the public education portion of the Town's stormwater management program are (1) the general public, (2) students in grade five, (3) the local construction industry, and (4) illicit dischargers. A variety of educational and communication tools are employed in an effort to reach each of these four diverse groups.

It is critical to the success of the stormwater management program that residents of the Town of Kernersville become aware of how their lifestyles impact stormwater pollution and the role(s) they must play to improve water quality in streams.
